STUDENT PORTAL

A. DESCRIPTION

The Student Portal is a comprehensive, integrated platform designed to manage real-time synchronization and security to automate administrative, academic, and support workflows for students across the campus. It acts as the central online hub for students, connecting various departments—such as Registrar, Academic Affairs, and Student Support—into a single, unified digital network.

Core Objectives and Functionality:

I. Empowering Schedule Management:

Enable students to easily view and manage their class schedules through a clear and accessible interface, fostering independence and promoting effective time management.

Core Objectives and Functionality:

II. Effortless Portal Access: Simplify the login process with multiple secure options, providing students with quick and easy access to the resources they need to succeed.

Core Objectives and Functionality:

III. Reliable Support and Assistance: Offer a dedicated support and help section with comprehensive resources and responsive customer service, ensuring students receive timely assistance when they need it.

B. Primary Objectives:

The Student Portal aims to integrate seamlessly into the student journey, driving continuous improvement and enhancing the overall educational experience.

B. Primary Objectives:
Enhance Information Accessibility:
Ensure students can easily access their schedules, academic records, and vital support information, promoting a sense of control and ownership over their education.

B. Primary Objectives:

Improve Administrative Effectiveness:

Streamline workflows to minimize administrative tasks, freeing up staff to focus on providing personalized support and guidance to students.

B. Primary Objectives:

Create a Seamless User Experience:

Design an intuitive and user-friendly platform with a simplified login process and comprehensive support resources, fostering student engagement and satisfaction.

B. Primary Objectives:

Enable Data-Driven Enhancement:

Provide valuable insights into student behavior and portal usage, facilitating continuous improvement and ensuring the portal remains responsive to evolving student needs

Requirements Gathering

Student enrollment in student portal is requirements gathering to process of identifying, analyzing, and documenting the needs of students, registrar, IT/Technical Staff, Support/Customer Service Staff, and University Management to ensure the portal supports a smooth and efficient enrollment process.

KEY STEPS OF REQUIREMENTS GATHERING OF ENROLLMENT PORTAL

I. Define objectives and scopes

Objectives:

- allow new user (students) to register easily online
- reduce manual errors in enrollment/registration

Scope:

- covers the enrollment process only (from registration to confirmation)
- integrated with database, authentication (log-in system) and reporting.

KEY STEPS OF REQUIREMENTS GATHERING OF ENROLLMENT PORTAL

II. Identify Stakeholders

Administrative staff: admission officers, registrars and IT support.

Students/Applicants: user of portal

Management/Board: dashboards and reports on enrollment numbers.

Support staff: helpdesk for technical assistance.

KEY STEPS OF REQUIREMENTS GATHERING OF ENROLLMENT PORTAL

III. Elicitation Techniques for Student

Enrollment in the Student Portal

Interviews: Talk to students, registrar, and staff about their enrollment needs.

Workshops/Focus Groups: Meet with groups of students or staff to discuss problems and desired features.

Observation: Watch how enrollment is currently done to see issues and steps.

Document Analysis: Review existing forms and policies to know required data

Surveys: Ask many students and staff for feedback through questionnaires

KEY STEPS OF REQUIREMENTS GATHERING OF ENROLLMENT PORTAL

IV. Analysis and Documentation

Categorize requirements into:

Functional: Enrollment, Scheduling, Registrar/Admin, Course Management, Reporting/Evaluating, Security

Non-functional: Security, Reliability, Usability, Performance, Storage

KEY STEPS OF REQUIREMENTS GATHERING OF ENROLLMENT PORTAL

V. Validation and Verification

Share the SRS with stakeholders (students, admin staff, IT). Create mock-up enrollment forms and dashboards for feedback, conduct a walkthrough session to confirm requirements are correct and adjust based on stakeholder feedback before moving to design/development.

Core Student Portal Requirements

A. FUNCTION REQUIREMENTS

MODULE	KEY REQUIREMENTS
ENROLLMENT	System must process enrollment with guarantee accuracy by ensuring real-time synchronization of students details
SCHEDULING	System must display the active term schedule in a clean, real-time format. Each listing must show Time, Days, Specific Room/Building, Instructor Name, and Email.
REGISTAR/ADMIN	Authorized staff must view, edit, and audit changes to core student demographic and program data.

Core Student Portal Requirements

MODULE	KEY REQUIREMENTS
COURSE MANAGEMENT	The system must provide current list of all courses offered by the institution. This catalog must be searchable and filterable by academic criteria.
REPORTING/EVALUATING	Students must be able to easily report system errors Access to all features and data views must
SECURITY	be strictly controlled based on the user's role (Student, Faculty, Registrar Admin). For example, a student cannot view another student's grades or a Registrar Admin's override option.

Core Student Portal Requirements

B. NON-FUNCTION REQUIREMENTS

CATEGORY	KEY REQUIREMENTS
SECURITY	Must strictly enforce Role-Based Access Control, preventing students from viewing other students' data or accessing admin functions.
RELIABILITY	All core pages (Login, Dashboard, Schedule View) must load and fully render within a seconds under average load.

Core Student Portal Requirements

B. NON-FUNCTION REQUIREMENTS

CATEGORY	KEY REQUIREMENTS
USABILITY	Users should be able to access the primary functions (Schedule View, Enrollment) from the main dashboard.
PERFORMANCE	The system must handle a specified number of concurrent users (e.g., 5,000) without noticeable degradation in performance during peak registration periods.
STORAGE	Must adhere to university policies requiring the permanent and secure retention of academic records (transcripts) and financial history.

Objectives of a Student Portal System

These objectives are essential for maintaining real-time synchronization, and security standards within the student portal system, ultimately enhancing the student experience and supporting institutional effectiveness.

I. Enhanced Student Experience Objectives:

These objectives are centered on improving the overall experience for students using the portal.

- **Enhanced Security:** Protect sensitive student data and ensure the privacy of personal information through security measures, including secure login protocols, data encryption, and regular security audits. This builds trust and ensures compliance with data privacy regulations.
- **Effective Time and Task Management:** Enable students to manage their time effectively by providing access to calendars, schedules, assignment deadlines, and other time-sensitive information, promoting organization and reducing stress. This contributes to improved academic performance and student well-being.

II. Operational and Efficiency Objectives:

These objectives focus on streamlining internal workflows and maximizing resource utilization.

- **Streamlined Financial and Administrative Processes:** Provide a centralized platform for managing tuition payments, financial aid applications, registration processes, and other administrative tasks, reducing paperwork and improving efficiency. This frees up staff time and reduces administrative costs.
- **Improved Efficiency and Accuracy:** Automate key processes, minimize manual data entry, and reduce errors in student records, ensuring accurate information and efficient workflows across departments. This improves data integrity and reduces the risk of errors.

WORKFLOW PROCESS

This workflow details the core process that automates and integrates the student's academic journey, focusing on the steps from enrollment confirmation to accessing course materials. The primary goal is to ensure the accuracy and synchronization of the student's registered data between the administrative system (Registrar/MIS) and the academic platform (LMS) to grant seamless access to their finalized schedule and course content.

STEP	DEPARTMENT	KEY ACTION
1. LOG IN & AUTHENTICATION	MIS	System verifies credentials. System verifies identity and grants access to the portal Dashboard. Displays Success Notification if success
2. Enrollment Application	REGISTAR/MIS	Student logs in, system verifies student eligibility (e.g., checks for missing immunization records, orientation completion, or prior academic holds).

STEP	DEPARTMENT	KEY ACTION
3. BILLING / FEE DISPLAY	CASHIER'S OFFICE	System calculates the charges and immediately applies a Full Subsidy/Waiver (e.g., the Free Tuition Law grant) to the tuition component.
4. Final Enrollment & Hold Release	Registrar / MIS	Student clicks "Submit." [Decision Point] If financially clear (e.g., aid covers tuition), enrollment is confirmed. Enrollment is officially recorded in the MIS. System automatically calculates tuition/fee charges and applies any pending financial aid.

STEP	DEPARTMENT	KEY ACTION
5. Schedule Viewing & Course Access	MIS	Student views their finalized Course Schedule (day, time, room number). Clicks on a course to access materials. System synchronizes enrollment data with the learning management system. Student can access course content, assignments, and materials
6. Ongoing Status / Follow up	MIS / FACULTY	Student checks grades, deadlines, and notifications throughout the term. System tracks Academic Progress (Grades/GPA). Sends notifications for assignment due dates or low-grade warnings
